Introduction

This state-specific version of *State Profiles: Reforming the Health Care System 2005* has been created to facilitate easier access to and distribution of a single state's information on key health issues. The state-specific report excerpts the four-page profile of each state that forms the heart of the larger book. Nine topic areas are covered within these four pages: Demographics, Expenditures and Financing, Health Status, Utilization and Quality of Services, Resources Available, Medicare, Medicaid, Health Coverage and the Uninsured, and Key Trends. In Key Trends, data for two points in time are presented, along with the cumulative percent change.

State Profiles: Reforming the Health Care System 2005, the larger book from which this information is derived, is a compilation of major health system characteristics for each state, the District of Columbia, the Commonwealth of Puerto Rico and the U.S. Virgin Islands. Published annually from 1990 to 2000 and biennially since 2001, the *State Profiles* series was developed by the AARP Public Policy Institute to help guide policy discussions among public and private sector leaders in health care throughout the United States. It offers a snapshot of each state's health care landscape by providing comparable state-level and national data for nearly 100 indicators that are otherwise difficult to obtain from a single source. The 13th edition of *State Profiles* presents the most up-to-date data available at the time of production.

While a comprehensive list of sources for the data presented in the four-page state profile is included in this state-specific version, readers should refer to the Data Documentation section of the larger book (*State Profiles: Reforming the Health Care System 2005*) for information specific to each indicator. The Data Documentation section of the larger book identifies the original source of data for each indicator, provides a detailed explanation of each indicator, describes any caveats or limitations that apply to the data, and provides additional detail for states that have an asterisk (*) noted in the four-page profile section. In addition, readers should use caution when making comparisons with information contained in previous editions because of changes that may have been made in the source or definition of a particular indicator.

For more information on key health policy issues, readers will also want to refer to the Health Policy Maps section of the larger book. Similarly, the State Data and Rankings section of the larger book is useful for comparing how states perform on certain indicators.

Questions about the state-specific version of *State Profiles 2005* can be addressed to the AARP Public Policy Institute, Health Team, at 202-434-3890. Additional copies of the larger book are also available through this number or visit <http://www.aarp.org/ppi> for electronic versions of these publications.
