

▼ DELIVER THE GOODS

In Gridlock City the pizza boy must make five deliveries from the pizza shop located at point 1 to five other locations (2, 3, 4, 5, and 6 as shown). The blocks in Gridlock City are all of the same size. What will be his best route starting from the pizza shop and returning again, visiting each location just once but in any order?

Here's a suggested approach for you to try: Work out the minimum distances between each set of locations, then find out which route will allow you to visit them all in the smallest taxicab distance.
