AARP is a nonprofit, nonpartisan membership organization that helps people 50+ have independence, choice, and control in ways that are beneficial and affordable to them and society as a whole. We produce AARP The Magazine, published bimonthly; AARP Bulletin, our monthly newspaper; AARP Segunda Juventud, our bimonthly magazine in Spanish and English; NRTA Live & Learn, our quarterly newsletter for 50+ educators; and our website, www.aarp.org. AARP Foundation is our affiliated charity that provides security, protection, and empowerment to older persons in need with support from thousands of volunteers, donors, and sponsors. We have staffed offices in all 50 states, the District of Columbia, Puerto Rico, and the U.S. Virgin Islands.

Acknowledgements

AARP staff from the Delaware State Office, State Affairs, and Knowledge Management contributed to the design and implementation of this study. Special thanks go to AARP staff including Brian Posey and Lucretia Young, Delaware State Office; Brian Elms, State Affairs; Rachelle Cummins, Darlene Matthews, Kate Bridges, Erica Dinger, Kendall Belisle, and Jennifer Leslie, Knowledge Management, who assisted with survey design and report preparation. Thanks also go to Michael Schuster and Jamie Wyatt, Office of General Counsel, for their review of the report. FGI, Inc. conducted the data entry and tabulation of survey results for this study. Joanne Binette, AARP Knowledge Management, managed all aspects of the project and co-wrote the report with Prantik Baruah. For more information, contact Joanne Binette at 202.434.6303.
AARP Members Age 50-64 in Delaware: Strong Proponents of Health Care Reform

According to the Delaware Health Care Commission, approximately 105,000 Delaware residents - 13 percent of the state population - were without health insurance in 2006. Although Delawareans are doing better than the nation as a whole in obtaining health insurance, the uninsured rate in the state has steadily increased over the past five years, raising concern among policymakers, residents, and specifically, AARP members.

AARP’s Delaware State Office, in response to the needs of its membership, commissioned this survey to explore the views of those members age 50 to 64 on the current state of health care in Delaware, their specific concerns about health care-related matters, and their opinions on prospective state reform. This mail survey of 2,000 randomly selected AARP members age 50-64 in Delaware was conducted in September 2007. Eight hundred twenty-eight surveys were returned yielding a response rate of 41 percent and a sampling error of plus or minus 3.5 percent.¹

According to the survey, seven in ten AARP members age 50-64 in Delaware believe that health care in Delaware is in a state of crisis or has major problems. The less income members earn, the more they seem to believe that health care is in fact in crisis.

AARP members age 50-64 in Delaware are concerned primarily with matters of health care cost, followed by overall quality and convenience of care. Approximately seven in ten members are extremely or very worried about having to pay more for their health care, as well as not being able to afford the services they believe they will need, in addition to other unforeseen costs.

Four in ten AARP members age 50-64 in Delaware with health care coverage are not confident that they will be able to maintain their present level of health care coverage over the next five years.

Nine in ten members consider it extremely or very important for the state of Delaware to reduce the number of residents without health care coverage, as well as to make health care more affordable for all. Despite significant concern about health care-related costs, nearly one-half of those surveyed would choose the improvement of health care quality and medical error reduction as the primary issue for state policymakers to work on in the coming year.

Delaware policymakers and candidates for state office should consider the findings in this study, as there appears to be overwhelming support for improving health care reform in the

¹ See page 15 for a detailed methodology.
state, specifically in the areas of cost controls, and overall quality improvement. Roughly one in seven Delawareans, as well as those members surveyed, are uninsured. Government officials need to examine the feasibility of any proposed statewide systems that will not only provide each resident, regardless of income level, with access to basic health coverage, but ensure the affordability of such plans for all Delawareans in need.

**Detailed Findings**

Seven in ten AARP members age 50-64 in Delaware believe that health care in Delaware is in a *state of crisis*, or at the least, has *major problems*.

The less income members earn, the more they believe that health care in Delaware is in a *state of crisis*. Specifically, 22 percent of those members who earn less than $20K per year and 16 percent of those who earn between $20K and $50K per year believe that the state is facing a health care crisis, versus only five percent of those earning between $75K and $100K per year and nine percent of those earning greater than $100K annually.
HEALTH CARE CONCERNS

According to the survey, AARP members age 50-64 in Delaware are concerned primarily with matters of health care cost, followed by overall quality and convenience of care.

Members’ Primary Health Care Concerns
(N = 828)*

- **Having to pay more for your health care**: 71% extremely/very worried, 21% somewhat worried, 7% not very/not at all worried.
- **Not being able to afford the health care services you think you need**: 66% extremely/very worried, 23% somewhat worried, 11% not very/not at all worried.
- **Not being able to pay for the costs associated with a major illness or injury**: 65% extremely/very worried, 22% somewhat worried, 13% not very/not at all worried.
- **Not being able to afford the prescription drugs you need**: 64% extremely/very worried, 21% somewhat worried, 15% not very/not at all worried.

* Percentage may not sum to 100 due to the accounting of Missing/No Answer responses.

When asked what worries them (with regard to health care), more than seven in ten members (71%) claim to be extremely or very worried about having to pay more for their current care, and approximately two in three (65%) are worried about not being able to afford the services they think they will need, as well as the unforeseen costs associated with a major illness/injury or necessary prescription drugs.

The survey also gauged whether or not members are being proactive in managing their own health care. It is interesting to note that only one in three members (33%) have created their own set of medical records to ensure that they and all of their health care providers have all of their records.

More significantly, 27 percent of members claim to have avoided going to the doctor altogether because they could not afford it.

Further, one in five respondents (21%) claim to have never checked the medication that a pharmacist gave them with the prescription that their doctor had written.
Four in five AARP members age 50-64 in Delaware believe that the numbers of uninsured or underinsured residents, as well as the rising costs of health care services, are *major problems* in their state.

**Perceived Problems in Getting Needed Health Care in Delaware**

(N = 828)*

<table>
<thead>
<tr>
<th>Issue</th>
<th>Major Problem</th>
<th>Minor Problem</th>
<th>Not a Problem</th>
</tr>
</thead>
<tbody>
<tr>
<td>Uninsured/underinsured residents</td>
<td>81%</td>
<td>15%</td>

<td>44%</td>
<td>16%</td>
</tr>
</tbody>
</table>

* Percentage may not sum to 100 due to the accounting of Missing/No Answer responses.

** Less than 5 percent of respondents consider these not a problem (uninsured/underinsured residents: 2%; rising costs: 3%)

Having likely incurred higher costs for health care, it is not surprising that a greater proportion of members (88%) who rate their health as *fair or poor* consider rising health care costs a *major problem*, versus those members who claim to be in *excellent* health (72%).

Members who characterize their political views as *conservative* are more likely than *moderates* or *liberals* to consider the overutilization of health care services when they are not needed a *major problem* in their state (conservative: 57%; moderate: 46%; liberal: 39%).

Members who claim to be *extremely* or *very interested* in state government activities that affect residents age 50 and older are more likely than those who are not as interested to consider both rising costs of health care services and the reduction in employer-sponsored health coverage in the state *major problems* as well (those members extremely or very interested in government: 81% consider rising costs a *major problem* versus those not very or not at all interested: 62%; those members extremely or very interested in government: 76% consider a reduction in employer-based coverage a *major problem* versus those not very or not at all interested: 55%).
OPINIONS ON POTENTIAL STATE HEALTH CARE REFORM

Nine in ten AARP members age 50-64 in Delaware consider it extremely or very important for the state to reduce the number of residents without health care coverage and to make health care affordable for all. Those with higher annual income levels and more conservative political views tend to place less importance on such potential reform.

Members with relatively lower annual incomes place more importance on the state reducing the number of residents without health care coverage than do their higher-income counterparts. For instance, 77 percent of respondents earning less than $20K annually consider it extremely or very important, versus only 56 percent of those earning more than $100K per year.

Members who characterize their political views as liberal or moderate are more likely to strongly agree that all Delaware residents should have access to the same basic health care coverage than their conservative counterparts (liberal: 77%; moderate: 68%; conservative: 50%).

Importance of State Health Care Reform in Delaware
(N = 828)*

* Percentage may not sum to 100 due to the accounting of Missing/No Answer responses.
Despite members’ significant concern for health care-related costs, if they were to pick one health care issue for the Governor and State Legislature to work on in the next year, half (47%) of those surveyed would choose the improvement of health care quality and the reduction of medical errors.

Given their overwhelming concerns about health care-related costs, it is interesting to note that only one in ten respondents would choose the ensuring of affordable health care coverage as the single issue that they believe the state government should work on in 2007-2008.

*Please interpret these results with caution, as respondents were "aided" with six options from which to choose.*
If a candidate for public office was to support the development of a health care system that gave the same basic coverage to all Delawareans, two in three AARP members age 50-64 in Delaware claim that they would be more inclined to vote for this individual. On the other hand, it would not make a difference to 24 percent of these members when voting.

Likelihood of Members to Vote for a Candidate for State Public Office if they Supported Same Basic Health Care Coverage for all Delaware Residents (N = 828)*

* Percentage may not sum to 100 due to rounding effects.
More than four in five AARP members age 50-64 in Delaware agree that *employers* and the *government* should contribute to a system so that everyone in the state can have the same basic health care coverage. It is not surprising then that a lesser proportion of respondents believe that *employees* and *individuals* should contribute to the same system.

levels of Agreement that Certain Groups Should Contribute to a Health Care Coverage System

(N = 828)*

<table>
<thead>
<tr>
<th>Group</th>
<th>Strongly agree/somewhat agree</th>
<th>Neither agree nor disagree</th>
<th>Somewhat disagree/strongly disagree</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td>Individuals</td>
<td>68%</td>
<td>13%</td>
<td>13%</td>
</tr>
</tbody>
</table>

*Percentage may not sum to 100 due to the accounting of Missing/No Answer responses.

Nearly 80 percent of those members who earn more than $100K per year agree that *individuals* should contribute to such a system, versus only 60 percent of members who earn less than $50K annually.
Over 90 percent of those members surveyed who characterize their political views as liberal agree that the government should be contributing to this “basic health care coverage system,” versus only 72 percent of their conservative counterparts.

Levels of Agreement that the Government Should Contribute to a Health Care Coverage System (By Political Characterization) (N = 828)*

<table>
<thead>
<tr>
<th>Political Characterization</th>
<th>Strongly agree/somewhat agree</th>
<th>Neither agree nor disagree</th>
<th>Somewhat disagree/strongly disagree</th>

<tr>
<td>Conservative</td>
<td>72%</td>
<td>6% 19%</td>
<td></td>
</tr>
</tbody>
</table>

* Percentage may not sum to 100 due to the accounting of Missing/No Answer responses.
** Less than 5 percent (3%) of “liberal” respondents disagreed that the government should contribute to a basic health care coverage system.
Health Care Coverage Profile of AARP Members Age 50-64 in Delaware

It is important to note that 15 percent of AARP members age 50-64 in Delaware surveyed do not have any kind of health care coverage, including health insurance or government plans such as Medicare or Medicaid.

Do members have any Kind of Health Care Coverage, Including Health Insurance or Government Plans?
(N = 828)*

- Yes: 83%
- No: 15%
- Not sure: 1%
- Missing/no answer: 2%

*Percentage may not sum to 100 due to rounding effects.

Given the relative ability to afford any sort of health care coverage as incomes rise, it is not surprising that members with incomes of more than $50K annually are much more likely to have any kind of health care coverage than those who earn less than $50K per year (e.g. income between $50K and $75K: 91%; income between $20K and $50K: 75%).
Of the 83 percent of respondents who do have some sort of health care coverage, most maintain such coverage through their current or previous employer.

In fact, employers (both current and previous) provide health care coverage for more than eight in ten respondents who claim to have any sort of coverage at all.

**Type of Health Care Coverage**  
*(n = 691 members with any kind of health care coverage)*

- Current employer: 56%
- Previous employer: 28%
- Medicare: 7%
- Veteran/military benefits: 9%
- Medicare Part D plan that covers prescription drugs: 5%
Although the amount of out-of-pocket medical expenses has stayed about the same over the past five years for nearly nine in ten members, 40 percent of those currently with coverage are not confident that they will be able to maintain their level of health care over the next five years.

Notwithstanding, only 26 percent of those members with health care coverage are extremely or very confident that they will be able to maintain their present level of coverage at an acceptable cost over the next five years.

**Member Confidence in Ability to Maintain Level of Health Care Over Next Five Years**

(n=691 members with any kind of health care coverage)

- Extremely confident: 10%
- Very confident: 16%
- Somewhat confident: 30%
- Not very confident: 23%
- Not at all confident: 18%
- Missing/no answer: 3%
Respondent Demographics (N = 828)

- **Age**

  - Married: 60%
  - Not married: 33%

- **Political Affiliation**
  - Democrat: 37%
  - Republican: 23%
  - Independent: 27%
  - Other: 3%

*Percentage may not sum to 100 due to rounding effects, as well as the accounting of Not Sure and Missing/No Answer responses.*
Methodology

AARP conducted the 2007 *AARP Delaware Health Care Survey* between September 19 and October 17, 2007. Mail surveys were sent to a randomly selected sample of 2,000 members between the age of 50 and 64.

Each sampled member was contacted about the survey in four ways: a pre-notification postcard, the survey itself, a reminder postcard, and a second survey. Of those surveyed, 828 returned completed questionnaires by the survey end date, yielding a response rate of 41 percent. The survey has a sampling error of plus or minus 3.5 percent.

Survey responses were weighted to reflect the distribution of those AARP members between the age of 50 and 64. As of December 30, 2007, there are 168,645 active AARP members residing in the state of Delaware. Throughout the report, statistics representing member responses are reported in percentages. Percentages may not sum to 100 due to rounding effects.
