

Why Health Care Reform is Important in Delaware

Health care reform is critical in Delaware as the population ages.

In 2008, the total population in Delaware was 870,654. Delaware has a significant older population who can be at greater risk for chronic illnesses: 14% of the population is age 65 and older and 18% is age 50-64.¹

Nearly 18,000 Delawareans age 50-64 are uninsured; many more are under-insured.

Too young for Medicare, but old enough to face higher insurance premiums, many 50-64 year olds have difficulty accessing affordable health care coverage. In 2007, there were 17,440 50-64 year olds in Delaware who were uninsured, and many with insurance were under-insured due to the high cost of coverage for this age group.² Additionally, about 15% of Delawareans age 19-64 are without health care insurance.³

Nearly one in five residents has Medicare.

In 2008, there were 139,709 Medicare beneficiaries in Delaware.⁴ In 2004, 84% of Delaware Medicare beneficiaries were age 65 and older and 16% were eligible due to disabilities.⁵ Nationally, Medicare beneficiaries spend on average nearly 30% of their income on health care costs.⁶

More than one in four Medicare beneficiaries fall into the Part D “doughnut hole.”

In 2007, of the Medicare beneficiaries in Delaware age 65 and older, 25% lived close enough to the poverty line to make them eligible for the Medicare Part D Low-Income Subsidy.⁷ Of those not eligible for the subsidy, 27% fell into “the doughnut hole,” or had to pay the full cost of their prescriptions for a portion of the year.⁸ In Delaware, that would be about 12,419 people who had to pay 100% of their prescription drug costs for at least part of the year, and this number is increasing each year.^{9,10}

Rehospitalizations are costly to Medicare and its beneficiaries.

Medicare spent \$12 billion nationally in 2005 on unnecessary or potentially preventable hospital readmissions.¹¹ In 2004, 18% of Delaware Medicare beneficiaries discharged from the hospital were re-admitted within 30 days.¹² Providing a follow-up benefit for Medicare beneficiaries could save billions and improve outcomes for patients.

Delaware spends most of the state’s Medicaid funds on institutional care.

Many older people and those with multiple chronic conditions and long-term care needs rely on Medicaid. Even though people prefer to remain at home, the state spends 90% of its Medicaid long-term care dollars for older people and adults with physical disabilities on nursing home care, and only 10% on home care services.¹³

Delawareans spend more on prescription drugs than the rest of the nation.

In 2007, Americans filled an average of 10 prescriptions at an average cost of \$53 per prescription. Delaware residents filled about 11 prescriptions at an average cost of \$59 per prescription.¹⁴ In 2005, about 52% of prescriptions for Delaware residents were filled with generics.¹⁵ If generic equivalents of biologic treatments were also available, Delaware residents could save millions of dollars each year.
