

Why Health Care Reform is Important in Massachusetts

Health care reform is critical in Massachusetts as the population ages.

In 2008, the total population in Massachusetts was 6,439,192. Massachusetts has a significant older population who can be at greater risk for chronic illnesses: 14% of the population is age 65 and older and 19% is age 50-64.¹

Nearly 64,000 Bay Staters age 50-64 are uninsured; many more are under-insured.

Too young for Medicare, but old enough to face higher insurance premiums, many 50-64 year olds have difficulty accessing affordable health care coverage. In 2007, there were 63,832 50-64 year olds in Massachusetts who were uninsured, and many with insurance were under-insured due to the high cost of coverage for this age group.² Additionally, about 10% of Bay Staters age 19-64 are without health care insurance.³

About one in six residents have Medicare.

In 2008, there were 1,015,086 Medicare beneficiaries in Massachusetts.⁴ In 2004, 84% of these Medicare beneficiaries were age 65 and older and 16% were eligible due to disabilities.⁵ Nationally, Medicare beneficiaries spend an average of nearly 30% of their income on health care costs.⁶

One in four Medicare beneficiaries falls into the Part D “doughnut hole.”

In 2007, of the Medicare beneficiaries in Massachusetts age 65 and older, 29% lived close enough to the poverty line to make them eligible for the Medicare Part D Low-Income Subsidy.⁷ Of those not eligible for the subsidy, 25% fell into “the doughnut hole,” or had to pay the full cost of their prescriptions for a portion of the year.⁸ In Massachusetts, that would be about 84,000 people who had to pay 100% of their prescription drug costs for at least part of the year, and this number is increasing each year.^{9,10}

Rehospitalizations are costly to Medicare and its beneficiaries.

Medicare spent \$12 billion nationally in 2005 on unnecessary or potentially preventable hospital readmissions.¹¹ In 2004, 20% of Massachusetts Medicare beneficiaries discharged from the hospital were re-admitted within 30 days.¹² Providing a follow-up benefit for Medicare beneficiaries could save billions and improve outcomes for patients.

Massachusetts spends most of the state’s Medicaid funds on institutional care.

Many older people and those with multiple chronic conditions and long-term care needs rely on Medicaid. Even though people prefer to remain at home, the state spends 76% of its Medicaid long-term care dollars for older people and adults with physical disabilities on nursing home care, and only 24% on home care services.¹³

Bay Staters spend more on prescription drugs than the rest of the nation.

In 2007, Americans filled an average of 10 prescriptions at an average cost of \$53 per prescription. Massachusetts residents filled about 13 prescriptions at an average cost of \$58 per prescription.¹⁴ In 2005, about 59% of prescriptions for Massachusetts residents were filled with generics.¹⁵ If generic equivalents of biologic treatments were also available, Massachusetts residents could save millions of dollars each year.
