

# Why Health Care Reform is Important in Maine

## Health care reform is critical in Maine as the population ages.

In 2008, the total population in Maine was 1,328,849. Maine has a significant older population who can be at greater risk for chronic illnesses: 15% of the population is age 65 and older and 21% is age 50-64.<sup>1</sup>

## Nearly 20,000 Mainers age 50-64 are uninsured; many more are under-insured.

Too young for Medicare, but old enough to face higher insurance premiums, many 50-64 year olds have difficulty accessing affordable health care coverage. In 2007, there were 19,703 50-64 year olds in Maine who were uninsured, and many with insurance were under-insured due to the high cost of coverage for this age group.<sup>2</sup> Additionally, about 12% of Mainers age 19-64 are without health care insurance.<sup>3</sup>

## Nearly one in five residents has Medicare.

In 2008, there were 252,025 Medicare beneficiaries in Maine.<sup>4</sup> In 2004, 80% of Maine Medicare beneficiaries were age 65 and older and 20% were eligible due to disabilities.<sup>5</sup> Nationally, on average Medicare beneficiaries typically spend almost 30% of their income on health care costs.<sup>6</sup>

## Nearly one in five Medicare beneficiaries falls into the Part D “doughnut hole.”

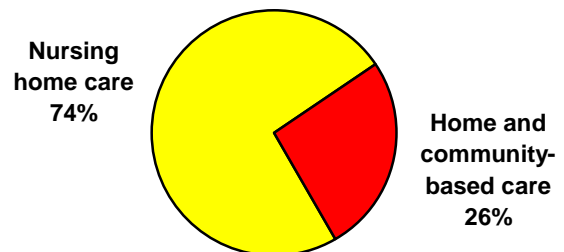

In 2007, of the Medicare beneficiaries in Maine age 65 and older, 28% lived close enough to the poverty line to make them eligible for the Medicare Part D Low-Income Subsidy.<sup>7</sup> Of those not eligible for the subsidy, 17% fell into “the doughnut hole,” or had to pay the full cost of their prescriptions for a portion of the year.<sup>8</sup> In Maine, that would be about 12,000 people who had to pay 100% of their prescription drug costs for at least part of the year, and this number is increasing each year.<sup>9,10</sup>

## Rehospitalizations are costly to Medicare and its beneficiaries.

Medicare spent \$12 billion nationally in 2005 on unnecessary or potentially preventable hospital readmissions.<sup>11</sup> In 2004, 18% of Maine Medicare beneficiaries discharged from the hospital were re-admitted within 30 days.<sup>12</sup> Providing a follow-up benefit for Medicare beneficiaries could save billions and improve outcomes for patients.

## Maine spends most of the state’s Medicaid funds on institutional care.

Many older people and those with multiple chronic conditions and long-term care needs rely on Medicaid. Even though people prefer to remain at home, the state spends 74% of its Medicaid long-term care dollars for older people and adults with physical disabilities on nursing home care, and only 26% on home care services.<sup>13</sup>

## Mainers spend more on prescription drugs than the rest of the nation.

In 2007, Americans filled an average of 10 prescriptions at an average cost of \$53 per prescription. Maine residents filled about 11 prescriptions at an average cost of \$59 per prescription.<sup>14</sup> In 2005, about 57% of prescriptions for Maine residents were filled with generics.<sup>15</sup> If generic equivalents of biologic treatments were also available, Maine residents could save millions of dollars each year.
