

Why Health Care Reform is Important in North Dakota

Health care reform is critical in North Dakota as the population ages.

In 2008, the total population in North Dakota was 635,887. North Dakota has a significant older population who can be at greater risk for chronic illnesses: 15% of the population is age 65 and older and 18% is age 50-64.¹

More than 12,000 North Dakotans age 50-64 are uninsured; many more are under-insured.

Too young for Medicare, but old enough to face higher insurance premiums, many 50-64 year olds have difficulty accessing affordable health care coverage. In 2007, there were 12,409 50-64 year olds in North Dakota who were uninsured, and many with insurance were under-insured due to the high cost of coverage for this age group.² Additionally, about 14% of North Dakotans age 19-64 are without health care insurance.³

Nearly one in six residents has Medicare.

In 2008, there were 106,005 Medicare beneficiaries in North Dakota.⁴ In 2004, 89% of North Dakota Medicare beneficiaries were age 65 and older and 11% were eligible due to disabilities.⁵ Nationally, on average Medicare beneficiaries typically spend almost 30% of their income on health care costs.⁶

One-third of North Dakota Medicare beneficiaries fall into the Part D “doughnut hole.”

In 2007, of the Medicare beneficiaries in North Dakota age 65 and older, 27% lived close enough to the poverty line to make them eligible for the Medicare Part D Low-Income Subsidy.⁷ Of those not eligible for the subsidy, 33% fell into “the doughnut hole,” or had to pay the full cost of their prescriptions for a portion of the year.⁸ In North Dakota, that would be about 19,000 people who had to pay 100% of their prescription drug costs for at least part of the year, and this number is increasing each year.^{9,10}

Rehospitalizations are costly to Medicare and its beneficiaries.

Medicare spent \$12 billion nationally in 2005 on unnecessary or potentially preventable hospital readmissions.¹¹ In 2004, 19% of North Dakota Medicare beneficiaries discharged from the hospital were re-admitted within 30 days.¹² Providing a follow-up benefit for Medicare beneficiaries could save billions and improve outcomes for patients.

North Dakota spends most of the state’s Medicaid funds on institutional care.

Many older people and those with multiple chronic conditions and long-term care needs rely on Medicaid. Even though people prefer to remain at home, the state spends 95% of its Medicaid long-term care dollars for older people and adults with physical disabilities on nursing home care, and only 5% on home care services.¹³

Nursing home care
95%

Home and community-based care
5%

North Dakotans spend more on prescription drugs than the rest of the nation.

In 2007, Americans filled an average of 10 prescriptions at an average cost of \$53 per prescription. North Dakota residents filled about 13 prescriptions at an average cost of \$53 per prescription.¹⁴ In 2005, about 57% of prescriptions for North Dakota residents were filled with generics.¹⁵ If generic equivalents of biologic treatments were also available, North Dakota residents could save millions of dollars each year.
