

Why Health Care Reform is Important in Oklahoma

Health care reform is critical in Oklahoma as the population ages.

In 2008, the total population in Oklahoma was 3,615,450. Oklahoma has a significant older population who can be at greater risk for chronic illnesses: 13% of the population is age 65 and older and 18% is age 50-64.¹

Nearly 95,000 Oklahomans age 50-64 are uninsured; many more are under-insured.

Too young for Medicare, but old enough to face higher insurance premiums, many 50-64 year olds have difficulty accessing affordable health care coverage. In 2007, there were 94,551 50-64 year olds in Oklahoma who were uninsured, and many with insurance were under-insured due to the high cost of coverage for this age group.² Additionally, about 25% of Oklahomans age 19-64 are without health care insurance.³

Nearly one in six residents has Medicare.

In 2008, there were 575,298 Medicare beneficiaries in Oklahoma.⁴ In 2004, 84% of Oklahoma Medicare beneficiaries were age 65 and older and 16% were eligible due to disabilities.⁵ Nationally, Medicare beneficiaries spend an average of nearly 30% of their income on health care costs.⁶

Three in ten Medicare beneficiaries fall into the Part D “doughnut hole.”

In 2007, of the Medicare beneficiaries in Oklahoma age 65 and older, 28% lived close enough to the poverty line to make them eligible for the Medicare Part D Low-Income Subsidy.⁷ Of those not eligible for the subsidy, 30% fell into “the doughnut hole,” or had to pay the full cost of their prescriptions for a portion of the year.⁸ In Oklahoma, that would be about 66,550 people who had to pay 100% of their prescription drug costs for at least part of the year, and this number is increasing each year.^{9,10}

Rehospitalizations are costly to Medicare and its beneficiaries.

Medicare spent \$12 billion nationally in 2005 on unnecessary or potentially preventable hospital readmissions.¹¹ In 2004, 20% of Oklahoma Medicare beneficiaries discharged from the hospital were re-admitted within 30 days.¹² Providing a follow-up benefit for Medicare beneficiaries could save billions and improve outcomes for patients.

Oklahoma spends most of the state’s Medicaid funds on institutional care.

Many older people and those with multiple chronic conditions and long-term care needs rely on Medicaid. Even though people prefer to remain at home, the state spends 73% of its Medicaid long-term care dollars for older people and adults with physical disabilities on nursing home care, and only 27% on home care services.¹³

Oklahomans spend about the same on prescription drugs than the rest of the nation.

In 2007, Americans filled an average of 10 prescriptions at an average cost of \$53 per prescription. Oklahoma residents filled about 11 prescriptions at an average cost of \$50 per prescription.¹⁴ In 2005, about 53% of prescriptions for Oklahoma residents were filled with generics.¹⁵ If generic equivalents of biologic treatments were also available, Oklahoma residents could save millions of dollars each year.
