

Long-Term Care in Mississippi

The number of Mississippi residents age 85 and older is projected to grow by nearly 50 percent by 2030.

Mississippi's older population can be at greater risk for chronic illnesses and in need of long-term care. Thirteen percent of Mississippi's population is age 65+ with 52,235 residents age 85+.¹ Mississippi's age 85+ population – the age group that is most likely to need long-term care services – will grow 45% from 2007 to 2030.² This makes Mississippi a lower-ranked state (#41) in the projected growth rate of the 85+ population.

Most prefer to receive long-term care at home; Mississippi spends almost ninety percent of the state's Medicaid funds on institutional care.

The majority of Americans age 50+ (89%) want to stay in their homes for as long as they can.³ Almost 790,000 Mississippians rely on Medicaid, and 12% are age 65+.⁴ Home and community-based service (HCBS) waivers allow Medicaid recipients to receive Medicaid funding for in-home care. In Mississippi, Medicaid allows some to choose in-home care instead of nursing home care. In 2006, 10,541 Mississippians 65+ with disabilities and 1,040 adults (18-64) with disabilities received a waiver.⁵ On average, the Medicaid program can provide HCBS to three people for the cost of serving one person in a nursing home.⁶

Mississippi spends 11% of its Medicaid long-term care dollars for older people and adults with physical disabilities on home and community-based care – ranking it 39th in spending on home care services for this population.⁷

In addition, 460,000 Mississippians are providing family caregiving to a loved one at home. This care is valued at over \$4 billion.⁸

Mississippi's average nursing home private pay rate is lower than the national average at \$174 per day.

In 2007, Mississippi's nursing homes had an occupancy rate of 90%.⁹ In 2008, Mississippi's nursing homes ranked 33rd in the country in its average private pay daily rate.¹⁰ Mississippi also had one of the lowest rates for home health aides (\$14/hr private pay) and adult day care (\$43/day) but had one of the highest rates for Medicare-certified home health aides (\$74/hr).¹¹

Nearly half of Mississippi's nursing homes rated below average in health inspections.

The Centers for Medicare and Medicaid Services (CMS) created a five-star quality rating to help consumers compare nursing homes. CMS rates nursing homes on health inspections, staffing, and quality measures.

The health inspection process is comprehensive and conducted by a trained team of objective surveyors.¹²

Recent studies have found that non-profit nursing homes generally deliver higher quality of care.¹³ In 2008, 61% of Mississippi's nursing homes were for profit (19%, non-profit; 12%, government-owned).¹⁴

Few Americans have long-term care insurance.

Nationally, about 7 million long-term care insurance policies were in effect in 2005, and the typical purchaser was age 61 with assets over \$100,000.¹⁵ Cost is a major factor in the decision to purchase long-term care insurance. In 2008, premiums for a married couple in their sixties were about \$3,000 a year.¹⁶ Mississippi has not adopted the most recent long-term care insurance recommendations from the National Association of Insurance Commissioners (NAIC).¹⁷

End Notes
